

NAMUN'21

UNCSTD²

Our last day began with a motion to set a new agenda item: Combatting Technological Disparity Across Nations. The first motion for a moderated caucus came from Iceland to discuss the use of AI for developing societies. After a few countries mentioned the importance of sustainability and efficiency in AI usage in their speech, the session ended. We started the new session with GSLs. Countries mostly stated their plans and indicated that they were open to collaborations. The GSL was over, and the delegates were asked to merge the three resolution papers written by three blocs: A, B, and C. After the delegates merged their papers, they voted on the said resolution paper and it thankfully passed.

When the voting was over, France motioned to have a moderated caucus to discuss the reasons for technological disparity across the nations. Many countries like the USA, North Korea, China and Nigeria found the reasons for the technological disparity to be mainly educational, economic and infrastructural.

Madagascar terminated the motion, and North Korea raised another one to finally talk about the solutions to decrease technological disparity across nations. There were some substantial solutions like funding and investing in other countries and companies, from countries such as the USA, UK and China. That was the end of the tenth session and we were off to a coffee break.

Our eleventh session started with the GSLs. Almost every delegate thanked and congratulated the team and the delegates for their effort. Our draft resolution was accepted by the committee and thus came the end of another year of NAMUN.

The rest of the session was spent with various activities to get to know each other and have fun. NAMUN 2021 was over with the distribution of awards and congratulations at the closing

Interview with North Korea and China

Did you ever think you would use the tricks and trades of MUN in real life? And if so, in

what ways are you finding yourself doing so?

NK: I think, for example I'm North Korea now, and since it's a hard country to defend you need to search every good thing they have. In real life when I'm in bad situation I can search the good details in it and find a positive way to look at it, so it's a trick.

What was your most interesting moment throughout all the MUNs you have joined?

NK: I think once when I was in a fiery debate with a delegate. It was interesting to see how I defended myself and tried to wither her arguments, then the chair said out of time limit and that's how we stopped.

Do you recommend current high school students to participate in MUN?

NK: Yes, I definitely do. They can add a lot of things to their character and cv.

What do think we can do to improve NAMUN?

NK: I think it'd be better if we had a session for amendment and work more upon resolutions.

Do you think MUN changes your perspective in life ,if so, how?

China: I do, because its model united nations. I mean if someone wants to be a politician, this is a great experience.

How do you think these conferences help real-world problems?

China: MUN teaches us to think deeply, also working together. It can help any of our problems in real life.

What was your most interesting moment throughout all the MUNs you have joined?

China: Actually, it's my first conference. But I had a moment that I can't forget. We had a bloc, and one of our delegates was discussing about something with another delegate. Our delegate spoke so amazing, that made the other delegate speechless.

What made you decide to join MUN?

China: One day my teacher contacted me and told the procedure, and I was into politics, so I said "This sounds perfect", and now I'm here.

Do you recommend current high school students to participate in MUN?

China: Definitely It would be a great experient for them and
